

The GIW 14-inch dredge pump is a heavy-duty pump designed for use in demanding dredging applications, such as mining, dredging, and construction. It is manufactured by GIW Industries, a subsidiary of KSB, which specializes in the design and manufacture of high-performance centrifugal pumps.

The GIW 14-inch dredge pump is capable of handling high volumes of abrasive slurries and solids, making it ideal for dredging operations in harsh environments. The pump features a large impeller and casing design, which allows it to pump solids of various sizes and densities with minimal wear and tear.

The pump is driven by an electric or diesel engine, and can be operated in either a horizontal or vertical orientation depending on the application. It is also available with various impeller and liner materials to suit the specific needs of the application.

Overall, the GIW 14-inch dredge pump is a reliable and efficient pump that is widely used in the dredging industry for its ability to handle tough materials and challenging operating conditions.
