

Efficient and Reliable Gold Dredge for Successful Mining

Gold dredge for Mining

This page is dedicated to the gold dredging machine - a suction dredger that is ideal for gold mining. It is designed to be highly efficient and easy to maintain. The gold dredge comes in different sizes such as mini gold dredge, small gold dredge, proline gold dredge, and underwater gold dredge, among others. Whether you need a new gold dredge or a used one, we have got you covered.

The gold dredge machine features three pontoons that can be quickly assembled and disassembled, making it easy to transport. It is powered by a diesel marine engine and a mechanical PTO that drives the dredge pump. The Jet installation, which can be switched between the dredger and the sluice box, is a unique feature that increases production and improves the efficiency of the gold mining process.

The gold dredge is easy to operate, and it can be operated by just one person. All the equipment is located on the main pontoon, making it road transportable with only a minimal number of parts that need to be dismantled. The mining dredge is an ideal solution for anyone looking to mine gold efficiently and effectively in rivers and other water bodies.
