## Jet Suction Sand Dredger

The **Jet Suction Sand Dredger** is a highly efficient machine specifically designed for sand dredging operations in shallow waters. Commonly used in rivers, lakes, channels, and docks, this equipment employs a high-pressure water jet to break up sand layers and a powerful sand dredging pump to suction the solids.

## Customizable and Efficient Dredging Solutions

Our sand dredgers can be customized to meet various project requirements, including:

- **Depths:** Adjustable to suit different dredging environments
- **Capacities:** Designed for both small-scale and large-scale operations
- **Discharge Distances:** Adaptable to specific transportation needs

The dredger is powered by a primary diesel engine and a smaller auxiliary engine, ensuring consistent performance for the submersible sand dredging pump and the high-pressure water pump.

## High-Performance Sand Dredging Pumps

Our **sand dredge pumps**, based on WEIR production and pipeline analysis sheets, utilize industry-leading Warman Dredge pump technology. These pumps are engineered to handle sand and solids with exceptional efficiency and reliability, ensuring uninterrupted operation even in challenging conditions.

## Available Sizes for Every Project

We offer a wide range of sand dredging equipment:

- **Small Sand Dredges:** Perfect for small-scale sand dredging operations
- **Large Sand Dredging Ships:** Ideal for extensive dredging projects in rivers, lakes, and harbors

Whether it's river sand dredging to maintain navigability or cleaning reservoirs and docks, our equipment is designed to perform effectively across diverse applications.

## Applications of Jet Suction Sand Dredgers

The versatility of our sand dredging equipment makes it suitable for:

- River sand dredging to maintain waterways
- Cleaning and maintaining reservoirs and harbors
